**Creating a Green Kitchen And Baths**

Thinking about Updating your Kitchen or Bath? Would you like to create a healthy environment and one that will save you energy?

Creating a Green Kitchen and Bath focuses on the myriad of details that need to be addressed to make beautiful, green rooms in your home. From color schemes to layout, energy-efficient appliances to material options for cabinetry and countertops, flooring and lighting, the workshop is a hands on opportunity for homeowners to bring in their plans and

get interior design ideas and remodeling advice to make their dreams a reality.

**Saturday, March 27**

**Managing Your Green Remodeling Project**

Are you dreaming of remodeling your home? Are you hoping to make the renovation as **Green** as possible?

Managing Your Green Remodeling Project is a nuts and bolts approach from concept to punch list to help homeowners understand the renovation process and manage their sustainable energy-efficiency goals in the process. Design layouts, interior design challenges, materials selections and working with contractors are all covered in this interactive workshop. Homeowners are encouraged to bring in their plans, sketches, magazine cut-outs or photos to get professional advice on how to manage their projects and get them underway.

**Healthy Environments - Cleaning Your Way to Green**

With so many cleaning options, air and water purifiers, chemical to combat and pollution all around us, it's a challenge to create a home or work environment that is clean and healthy – free from VOC's, carcinogens and irritants. Healthy Environments - Cleaning Your Way to Green will provide simple steps, materials and resources to create a healthier home and work place. Cleaning solutions vary and individuals have different levels of sensitivity. Learn how to distinguish what will work best for you, your family or your staff. Air and water purification is another sensitive area that offers many solutions. We'll discuss how to assess your needs and make informed decisions that will improve your air and water quality. Guest Speaker Joe Letourney will provide information on his revolutionary EcoWater systems. A must see **BE GREEN** event.
